

Jentor

Your Jenius Transaction History Parser

Team

A wife, teacher
who loves to solve problems.

A husband, software engineer
who is passionate on
open source technologies.

Problem

We are avid Jenius users.

As a family, we agreed for using Jenius as a day-to-day and all-in-one financial solution, but so far we have one issue on Jenius app,

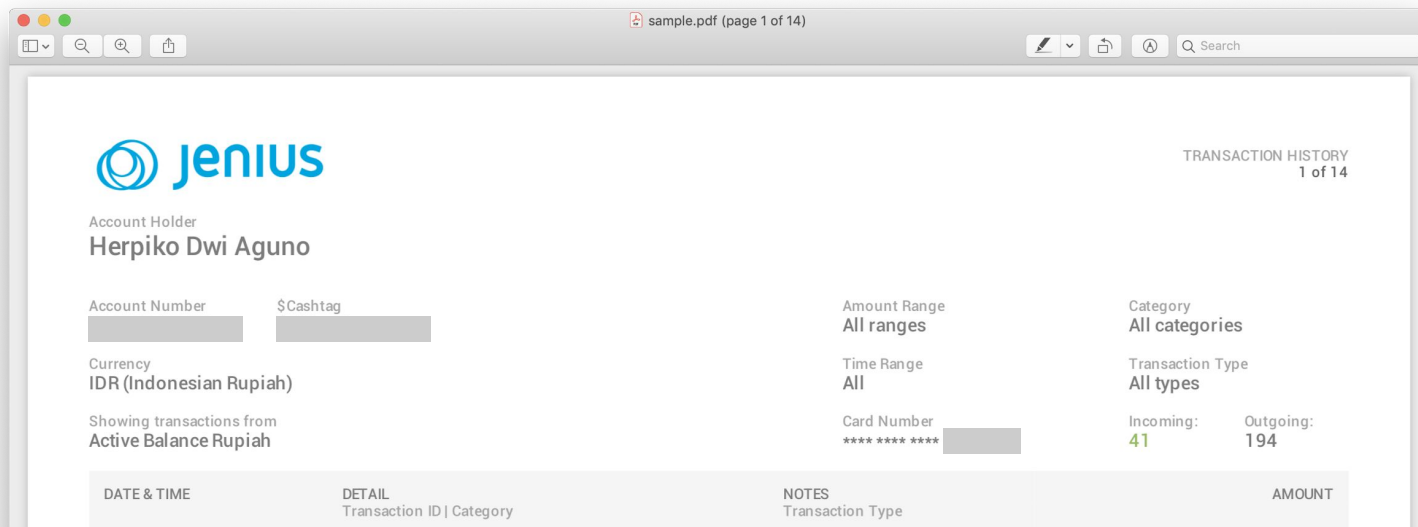

**We have no idea where our money has been spent,
specifically on visual conclusion.**

Thus, we want to have sophisticated and visualized report of our spending.

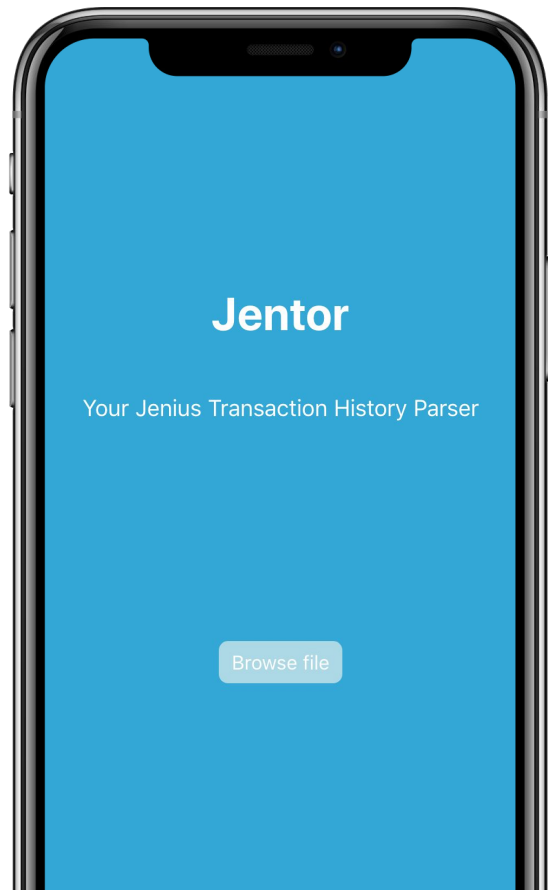

Concept

Jenius mobile app can export the PDF file of transaction history. Since Jenius has not released their public API yet, this is the only source that we can use to fix our problem.

If Jenius opens their API publicly, we'll utilize it as well.

Concept

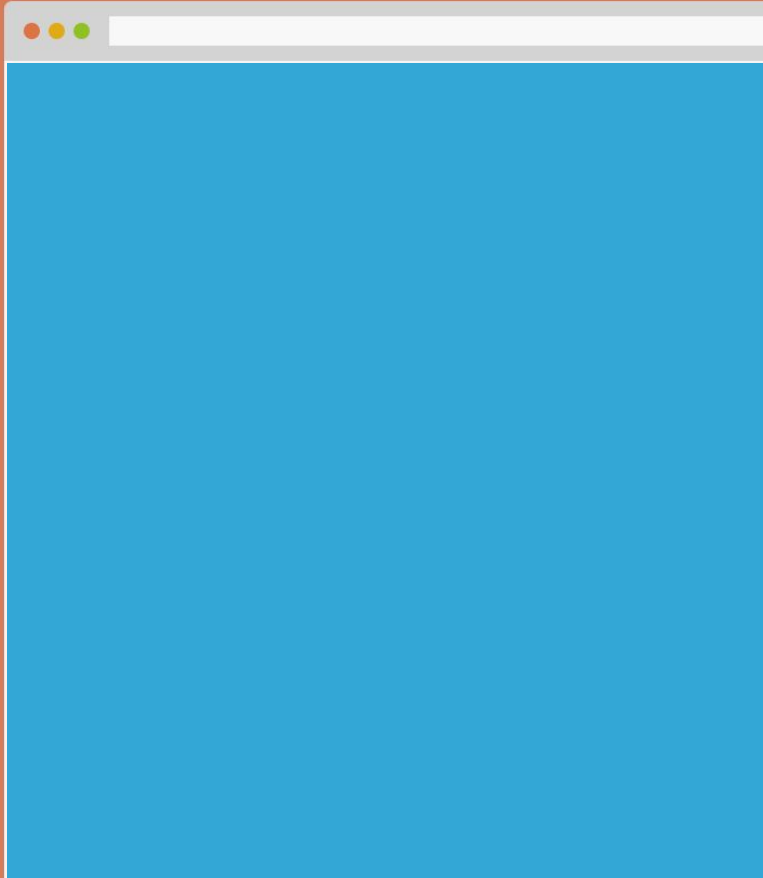

We intend to create something that can be used immediately by any Jenius users after we finished the hackathon.

We will create a simple yet useful PWA web application that parses this PDF file and analyzes the data, then let users to be enlightened about their financial adventure on Jenius.

Our app does not and will not upload the PDF file to the cloud. The PDF file will be parsed and processed in the app/browser itself, hence zero user data will be out from your device. We know and fully understand about privacy.

Concept

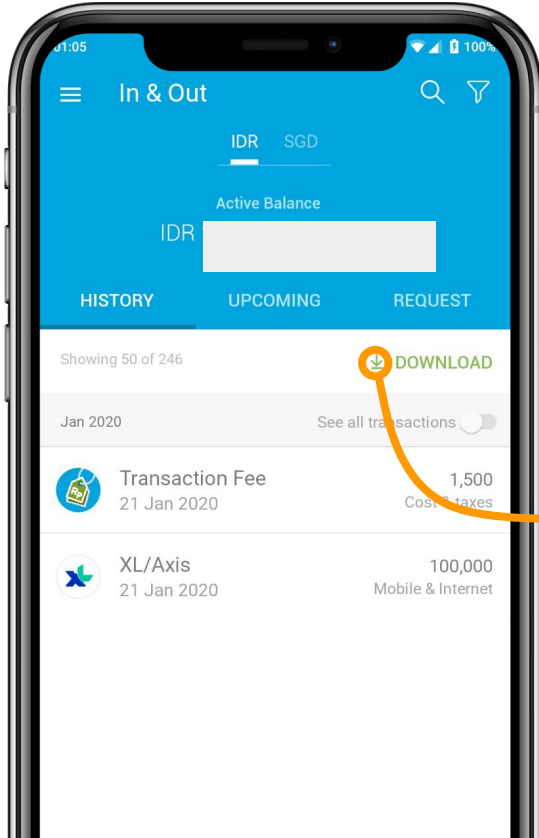

We choose PWA technology because of its offline-first nature and it covers both desktop and mobile platform.

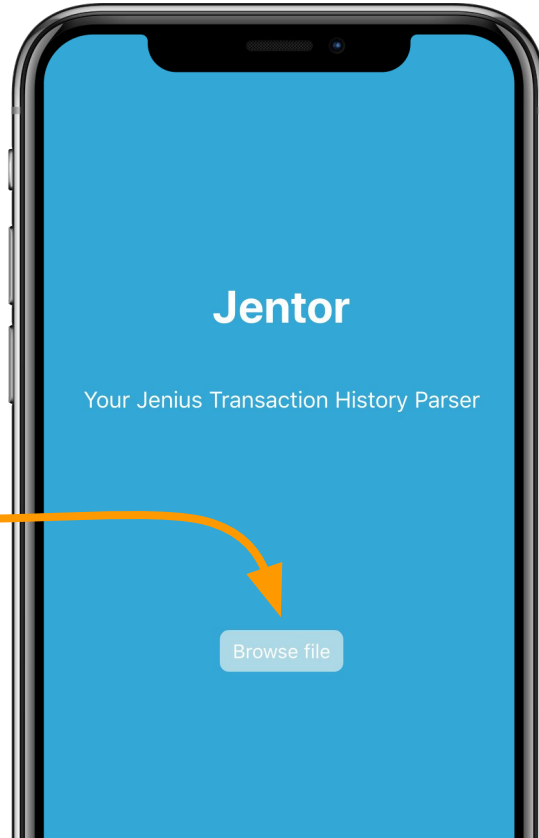

You can have Jentor as a mobile app, desktop app or web app.

Flow

1. Download your history

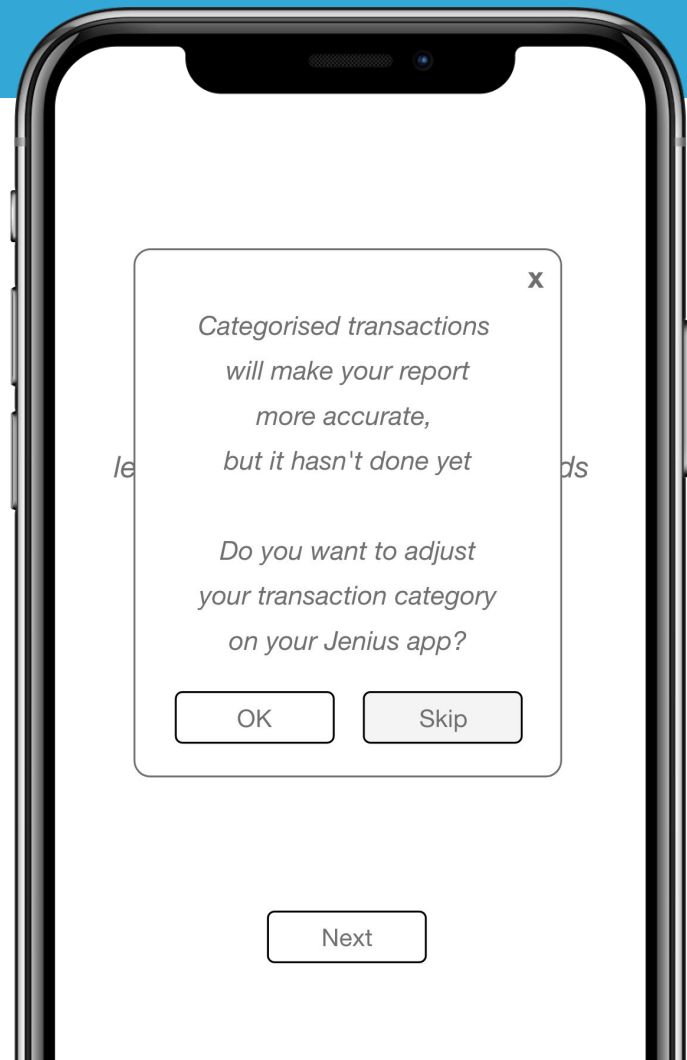

2. Pick the PDF file

3. See the magic does its job

Wireframe

Transaction category warning

Jentor will warn you if you haven't set enough transaction categories yet.

Wireframe

Hello

Jentor will greet you with assistance.

Wireframe

A wireframe of a mobile application screen. At the top, the title 'Budget Adjustment' is centered. Below it, there are five input fields, each preceded by a category label: 'Housing', 'Groceries', 'Food & drinks', 'Hobby', and 'Pet'. Each input field contains the text 'Rp.' followed by a horizontal line for text entry. Below the input fields, there are three dots indicating more categories. At the bottom, there are two buttons: 'Next' and 'Skip'.

Budget Adjustment

Housing Rp.

Groceries Rp.

Food & drinks Rp.

Hobby Rp.

Pet Rp.

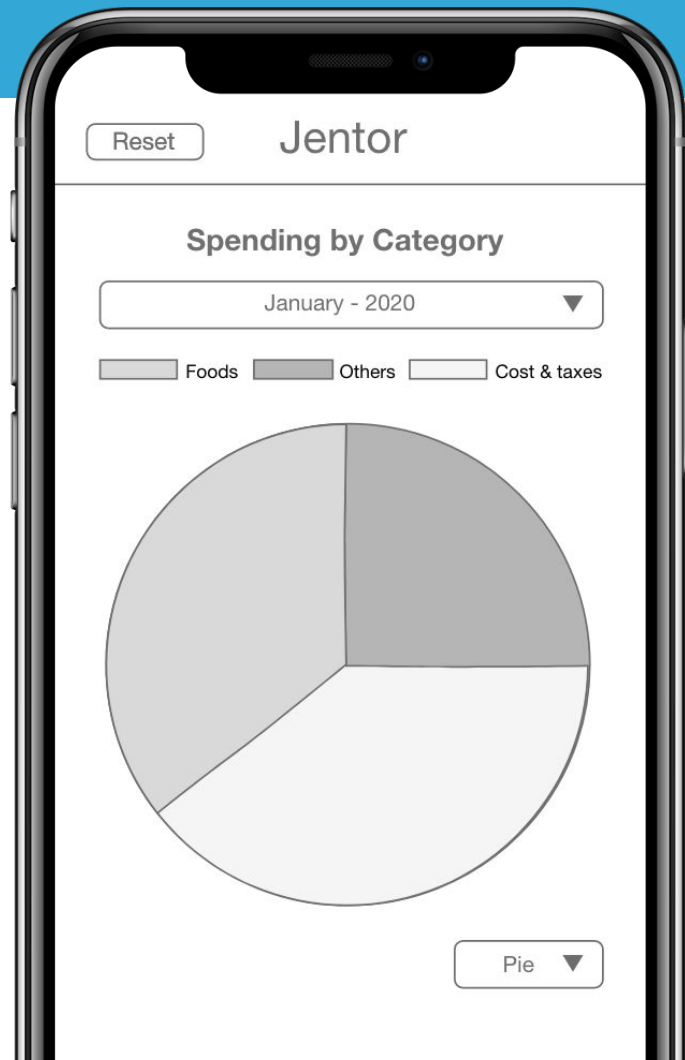

...

Next Skip

Budget Adjustment

You can set your budget threshold for each category per month.

Wireframe

Spending by Category

Your entire transactions will be visualized according to Jenius' transaction categories.

Wireframe

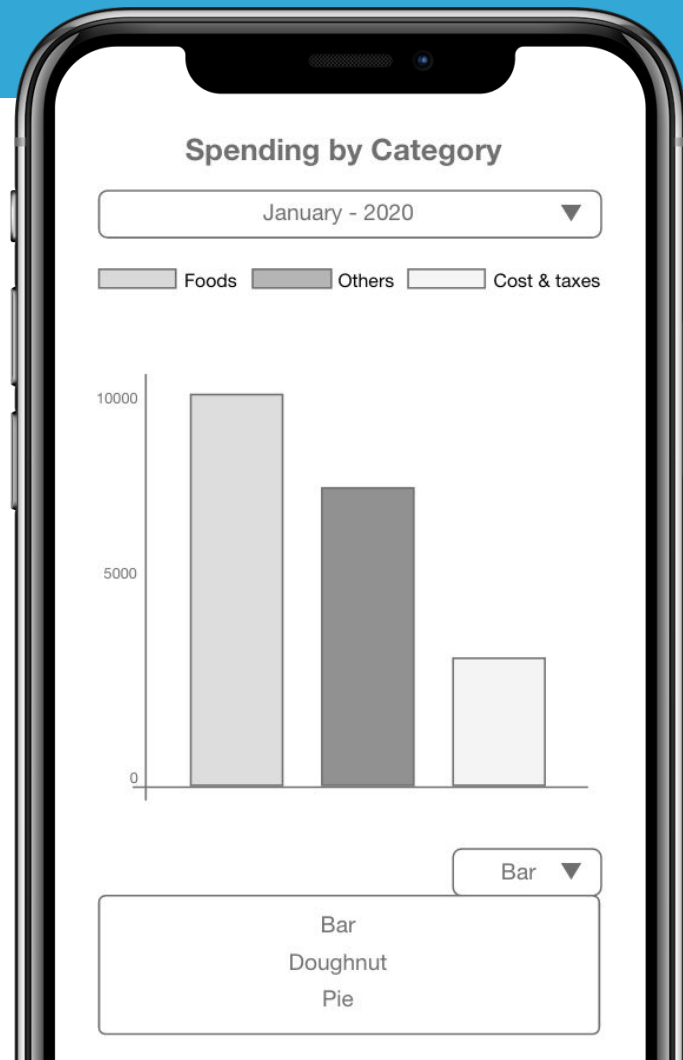

Chart Type Options

Users can choose Bar chart if they like. Jentor provides several chart types.

Wireframe

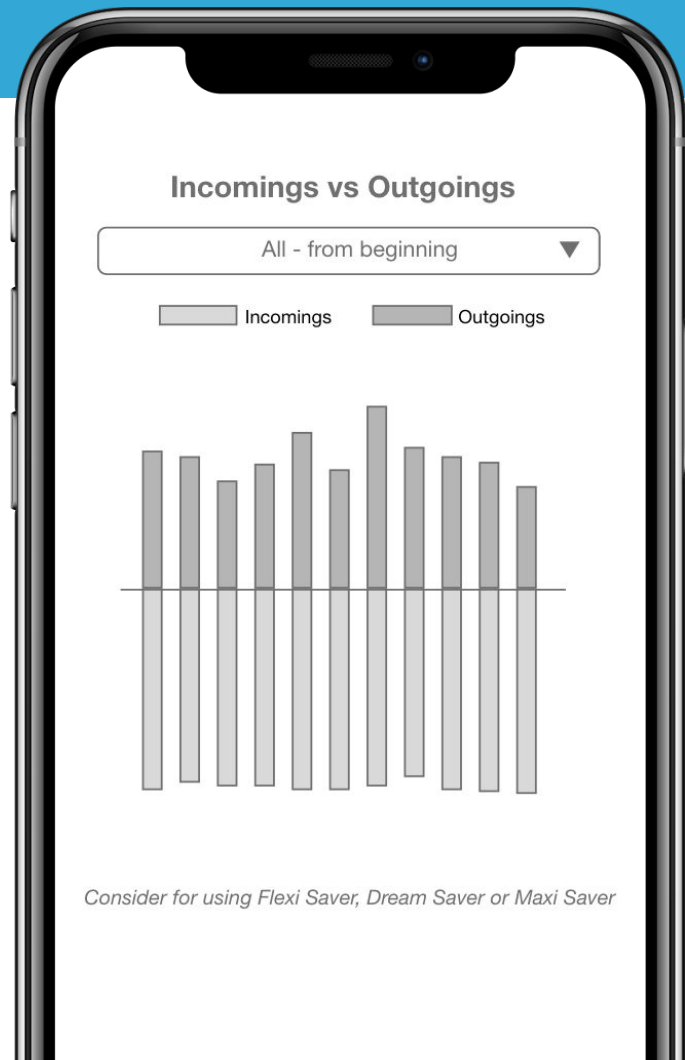

Incoming vs Outgoing

We've carefully splitted the Jenius's categories into incoming and outgoing, both are visualized.

You'll have more insight of how much you can save monthly.

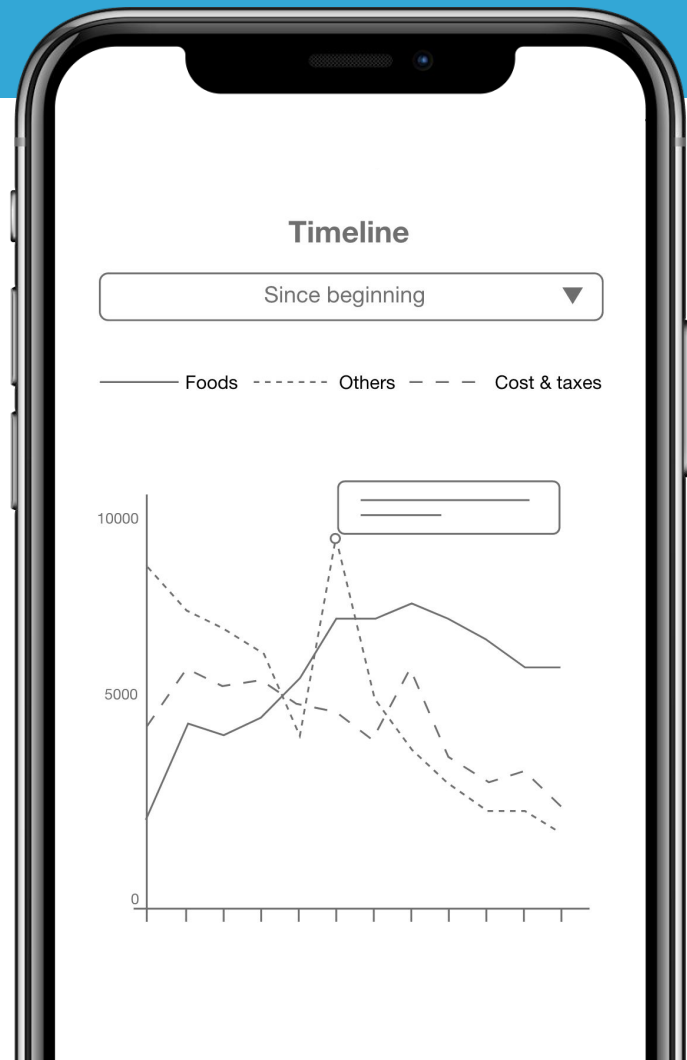

Wireframe

Comparison

You can also compare to other months' data.

Wireframe

Timeline

You can also see your financial timeline.

See the line that climbs drastically?
Jentor will make you remember what on earth is that. You can click on any timeline point to see the transaction that occurred at that time.

Wireframe

Budget Watch

Jentor will tell you whether you are over budget or not.

Wireframe
